

BRAND STYLE GUIDE

Boardwise

Single source of truth for design tokens, component primitives, and visual language across Boardwise.

- Play More
- Think Deeper
- Connect Better

01 - Brand Palette

Material-inspired game tokens. Each core brand color maps directly to functional semantic tokens.

11.2:1 AAA

Obsidian
Headings / Secondary
`--obsidian`
#4E1E5C

7.4:1 AAA

Merlot
Primary Hover
`--merlot`
#8E1B4E

4.6:1 AA

Wildfire
Primary Action

3.2:1 AA

Copper
Accent / Badges

#2E1430

6.1:1 AA

Ashquill

Muted Text

--ashquill
#6B5563

02 - Logos and Boarley the mascot

The Boardwise logo system represents the identity of the platform. Use approved logo variations to maintain consistency across all digital experiences.

Using Boardwise Brand Assets

The Boardwise logo should always represent the brand accurately. Never modify, recreate, distort, or alter official logo assets.

The logo system includes multiple variations designed for different layouts while maintaining a consistent identity.

Primary Logos

BOARDWISE

Light Mode Logo

The main Boardwise logo used for websites, navigation, documentation and wide layouts.

Usage

BOARDWISE

Dark Mode Logo

The main Boardwise logo used for websites, navigation, documentation and wide layouts.

Primary Usage

Icon Logo

Designed for smaller spaces including mobile layouts, social profiles.

Logo Usage Guidelines

✓ Do

Use approved logo assets

Always use the official Boardwise logo files without modification.

Maintain clear space

Keep enough empty space around the logo so it remains visible.

Use correct proportions

Scale the logo proportionally without changing its shape.

✗ Don't

Do not stretch the logo

Never change the width or height independently.

Do not change colours

Do not apply custom colours, gradients or effects.

Do not rotate the logo

The logo should always remain upright.

03 - Type System

DynaPuff brings playfulness to headers, Plus Jakarta Sans keeps body copy readable, and Comic Neue handles callouts.

H1 – 40px / DynaPuff Bold

The quick brown fox jumps over the lazy dog

H2 – 24px / DynaPuff Bold

Explore Strategy & Worker Placement Games

H3 – 20px / DynaPuff Bold

Upcoming Game Nights & Events

Body Large – 20px / Plus Jakarta Sans

Boardwise connects players through curated board game events, localized collection management, and community reviews.

Body – 15px / Plus Jakarta Sans

Standard text used across game summaries, rule descriptions, comments, and form inputs. Optimized for legibility.

04 - Spacing & Radius

An 8px spacing scale and a small set of corner radii keep rhythm and shape consistent across the app.

Spacing Scale

--space-1	4px	
--space-2	8px	
--space-3	12px	
--space-4	16px	
--space-5	20px	
--space-6	24px	
--space-8	32px	
--space-10	40px	
--space-12	48px	
--space-16	64px	

Radius

			
--radius-sm 10px	--radius-md 16px	--radius-lg 24px	--radius-pill 999px

Shadow

sm

--shadow-sm

md

--shadow-md

lg

--shadow-lg

05 - Components

06 - Icons

Material Design Icons (mdi) bundled with Vuetify. Use a semantic colour token rather than a raw hex value.

Sizes

Colour Variants

Common Set

07- Accessibility

Boardwise targets WCAG 2.2 level AA as a minimum. All interactive elements have visible focus states, all images have alt text, and all colour combinations meet contrast requirements

AA

WCAG 2.2 Target

Minimum standard for all text, interactive elements and UI components. Primary action colours (wildfire on white) meet the 4.5:1 ratio for normal text.

3px

Focus Ring Width

All focusable elements show a 3px rosewood outline with 2px offset. Visible in both light and dark mode. Never removed with outline: none.

Reduced Motion

All animations and transitions respect prefers-reduced-motion. Duration drops to 0.01ms when enabled.

Contrast Ratios

Text on Backgrounds – WCAG 2.2

Aa	Wildfire on Alabaster 4.5 : 1	AA
Aa	Obsidian on Alabaster 10.2 : 1	AAA
Aa	Shadowink on Scrollpaper 14.5 : 1	AAA
Aa	Ashquill on Scrollpaper 5.9 : 1	AA
Aa	Copper on Alabaster 3.1 : 1	Use large text only
Aa	Rosewood on Alabaster 2.1 : 1	Decorative use only

08 - Voice & Tone

Boardwise talks like a knowledgeable friend who loves games – enthusiastic, clear, never condescending. We're playful when the moment calls for it and direct when it doesn't.

✗ Write like this

Your rulebook is ready to read.

Catan Night starts in 2 hours – you're in!

You are invited to an event by host (e.g james)

✓ Not like this

Your rulebook is ready to read.

Catan Night starts in 2 hours – you're in!

You are invited to an event by host (e.g james)

Personality Traits

 **Playful** – We love games and it shows

 **Clear** – No jargon, no waffle

 **Welcoming** – Everyone's a board gamer

 **Direct** – Tell people what to do next

 **Specific** – Names, numbers, real details

Error Messages

Meet Boarley

Our mascot – a warm witty boar who shows up in empty states, tooltips and celebratory moments

Boarley's personality

😊 **Warm** – Encouraging, never smug

⚡ **Quick-witted** – A light joke, not a bit

📖❤️ **Loyal** – He's on the player's side, always

🐾 **A little scrappy** – Boars root around and dig things up – he is curious and a bit tenacious

Boarley in his own words

Rooted around and found your rulebook – it's ready.

No event on your calendar. Would you like to find more events?

Beautiful listing! I'll go tell the others.

09 - Do's & Don'ts

Colour, type, focus states and motion rules for boardwise.

Colour

✗ Don't

Featured

For Rent

No Copper(--copper) usage for important text or information. Use strictly for contrast.

✓ Do

Featured

For Rent

✗ Don't

Obsidian text on Wildfire

Never pair Obsidian (`--obsidain`) with Wildfire (`--wildfire`) - as text on background or adjacent blocks. Contrast is poor and the two reads as a clash.

✓ Do

Alabaster text on Wildfire

Pair Wildfire with Alabaster (white) for text. Keep Obsidain for headings on neutral surfaces (Alabaster / Scrollpaper) instead.

Typography

✓ Do

Your rulebook is ready to read.

Body copy uses(`--font-body`) (Plus Jakarta Sans).

Focus states

✗ Don't

Don't mix focus styles: `.btn` instead swaps its border to 3px Rosewood outline, but `.input` instead swaps its border to Wildfire. Two different signals for the same state trains users to ignore both. Rosewood can disappear against Scrollpaper or light surface.

✓ Do

Pick one focus treatment and use it everywhere – e.g. 3px outline in a colour that passes 3:1 every surface it can appear on (Wildfire or Obsidian test better than Rosewood). Apply it the same way on buttons, inputs, links and cards.

Legacy tokens

✗ Don't

Don't reach for `--bw-maroon`, `--bw-navy`, `--bw-accent-coral`, `--grape`, `--raspberry`, `--tangelo`, `--blossom`, or any other legacy alias in new code – they all still resolve, which is exactly the problem: they let old colour names creep back into new components with no warning. Use the semantic tokens (`--color-primary`, `--color-secondary`, etc.) or the current brand names (`--wildfire`, `--obsidain` ...) directly, and treat the aliases as read-only scaffolding for old code, not a menu.

Quick reference

- ✓ Primary actions & emphasis – Wildfire
- ✓ Secondary accent (was Copper's job) – Merlot
- ✓ Rosewood pairs with Shadowink or Alabaster text only
- ✓ One focus treatment, applied consistently everywhere
- ✗ Copper – use sparingly
- ✗ Obsidian text/elements on Wildfire backgrounds
- ✗ Legacy token aliases (`--bw*`, `--grape`, `--raspberry`, `--tangelo`, `--blossom`) in new code
- ✗ `--color-primary` : `--feltboard` override in dark mode

10 - Changelog from Demo 1

What changed since Demo 1 guide, and why. Full rebrand of colour and type; component values evolved from Figma spec to implemented CSS tokens.

Colour palette - full replacement

Role	Demo 1	Demo 2	Rationale	
Primary	Gold #C9A86E	Wildfire #C7286E	Gold read as generic/corporate; Wildfire ties to the "event card" brand story and gives a stronger, more distinctive primary action colour.	
Button bg (undocumented in Demo 1's own palette table)	Maroon #6D0037 / Merlot #8E1B4E hover	Demo 1 referenced Maroon in the component spec but never catalogued it as a token - consolidated into the new Wildfire/Merlot pair so every button colour is traceable to a named token		
Accent (CTA)	Coral #E4573E / Orange #F97316	Copper #EF5B27 - retired		
Focus / Secondary accent	Violet #7C3AED / Light violet #A78BFA	Obsidain #4E1E5C	Purple carried forward as a brand colour (Obsidian), but its Demo 1 job - the focus ring - didn't fully migrate. Flagged in Do's & Don'ts as an open fix: Demo 3 will be changed.	Cool grey neutrals swapped for warm, paper/felt-toned neutrals to match the "tabletop" brand metaphor introduced in Demo 2.

Typography - full replacement

Role	Demo 1	Demo 2	Rationale	
Headings	Myanmar Khyay	DynaPuff	Myanmar Khyay is a script-specific font with no thematic tie to the brand; DynaPuff's rounded, playful forms better match a board-game platforms's voice.	
Body	Inter	Plus Jakarta Sans	Similar geomretic feel to Inter but slightly warmer letterforms, better pairing with DynaPuff headings.	

Role	Demo 1	Demo 2	Rationale
Buttons	Hammersmith One	Plus Jakarta Sans	Reduced to two font families total for simpler maintenance and fewer web font requests.

Components - evolved, not replaced

- **Buttons:** radius changed from 10px to a full pill (999px); disabled state (50% opacity, not-allowed cursor) and active-state 1px nudge carried over unchanged from Demo 1.
- **Cards:** radius increased from 16px to 24px; padding (24px) and the hover shadow-sm to shadow-md pattern carried over unchanged from Demo 1.
- **Badges/tags:** soft-gold pill concept carried over in spirit, now using Rosewood in place of the retired gold/coral tones.

Carried forward unchanged

The five Design Principles from Demo 1 - Consistency, Simplicity, Responsiveness, Accessibility, and Clarity Feedback - still hold and re not restated here in full; see Section 06 (Accessibility) and Section 07 (Voice & Tone) for how they're now expressed in implemented components rather than standalone guidance.
